

*Safety through quality*

## PRODUCT BRIEF

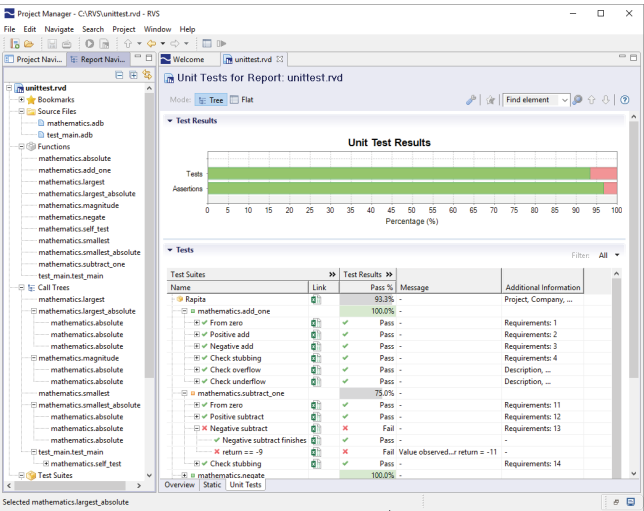

# Functional testing for critical software with RapiTest

# Product brief: RapiTest

## How can RapiTest help you?

RapiTest drives the inefficiencies out of functional testing in critical software verification projects. By automating the creation and execution of unit, integration and system tests from input tests written in easy to use test formats, it reduces the cost of critical software verification.

Test results collected by RapiTest

RapiTest's test formats make it easy to write tests at any level (unit, integration, system) and define all types of stub behavior used in the industry.

## Benefits of using RapiTest

- Automated platform for unit and system testing both **on-target** and **on-host**. Integrate testing into your existing build process to improve the efficiency of your testing.
- Efficient test generation. Minimize build cycles and test rig utilization by running multiple tests per build.
- Fast incremental builds. RapiTest builds only critical files when your code base changes, even in systems with very large code bases.
- Manage project artifacts. import requirements from various formats, link tests to requirements, view test results against requirements and export traceability results.
- Minimize "usercode" by writing tests in any of RapiTest's test formats. These let you write test cases for generics or multi-dimensional tables without "usercode".

- Flexible test authoring. Write tests in any of 3 test formats, each with different benefits. Convert tests between these formats automatically for ultimate flexibility.
- Advanced support for Ada. RapiTest handles even the most complex Ada code constructs such as generics, nested functions and private types.
- Flexible stubbing options. Write both simple and complex behavior for stubbed functions easily. RapiTest supports all types of stubbing behavior, including stubs, fakes, mocks, spies and dummies.
- Interface with other RVS plug-ins. Integrate coverage, timing and scheduling analysis into your testing process.

Contexts						
Context name	Shorthand	Parameter	Type			
Mathematics						
Scope						
Subprogram name	Shorthand	Parameter	Type			
Absolute		Value return	Integer Integer			
Stubs						
Subprogram name	Shorthand	Parameter	Type	Default		
# No stubs defined for these tests						
Tests						
Test details	Meaning	Call or stub	Variable	Operation	Value	Value
New_Test						
Name					Zero	Positive
Requirements					2	3
		Absolute	Value	set	0	5
			return	check	0	5
End_Test						

The RapiTest Spreadsheet Test Format makes it easy for test authors without programming experience to write and review tests

## RapiTest use cases

- Functional and requirements-based system, integration, and unit testing for critical software.
- Address avionics software guidelines: DO-178B/C, A(M)C 20-193, MIL-HDBK-512C, AA-22-01, AMACC ...
- Address space software standards: NASA NPR 7150.2d and ECSS-E-ST-40C.
- Address ISO 26262 requirements.

## How does RapiTest work?

RapiTest uses input test suites to automate functional testing by building a test harness, executing tests, collecting data and generating reports.

It supports test authoring through a variety of formats and is easily driven through a user interface. By integrating with your existing development environment, RapiTest reduces the overheads needed to test your code.

RapiTest supports large testing projects by offering a portable test environment and retaining references to code and revision numbers in test reports.

## Key features

### Functional testing

- Generate and run functional tests at any level (system, integration, unit)
- Generate test templates quickly
- Automatically generate test vectors to check boundary values for C and C++ functions
- View status of tests for each requirement
- Create support functions to easily reuse across multiple tests
- Merge reports from different test runs and builds
- Easily manage test runs, quick filter and select tests with specific status (new, modified, failed), save and load test selections
- Portable test environments let you use a single project file throughout a team
- Results filtering and search options to highlight project progress over time
- Requirements traceability
  - Import requirements from various formats
  - Link tests to requirements
  - View status of tests for each requirements
  - Export traceability results
- White box testing
- Black box testing

### Test authoring

- Flexible test authoring through 3 testing formats, **RapiTest Editor** (integrated into the RapiTest user-interface), spreadsheet and scripting formats
- Convert tests between formats automatically at any time (cannot convert from test scripts)
- Minimize usercode by defining even complex tests easily
- Tutorials, documentation and training to get started easily

### Language support

- Ada 83-2012, support for GNAT Pro™ and Green Hills® compilers among others
  - Handles even the most complex code constructs such as generics, nested functions and private types
- Support for C and agreed C++ language features

### Integration with build system

- Multiple strategies available: compiler wrappers, clone integration, and scripting into build system directly
- Support for very large code bases
- Shared integration with other **RVS** tools
- Test what you compile - test unmodified object code

### Target integration

- Support for data collection using Address bus, CAN bus, Ethernet, GPIO, JTAG, Serial (RS232), debuggers and our **RTBx** data logger
- Extremely low overhead map data collection can be configured with a single assembly instruction
- No library/run-time dependencies or dynamic memory requirements

### Tool qualification

- Qualification kit and service to support DO-178B/C and ISO 26262 tool qualification

### Third party integration

- Tools such as Mx-Suite™, MATLAB® Simulink®, ANSYS® SCADE® Test™ and GNAT GPS™
- Continuous build servers e.g. Jenkins®, Atlassian Bamboo®
- Support migrating tests from other tools e.g. VectorCAST® and AdaTest®
- Requirements management tools through Requirements Interchange Format (ReqIF), dedicated integration with Jama Connect®
- Debuggers e.g. Lauterbach™, i-SYSTEM®
- Software Configuration Management system

### Integrated testing environment

- Summary and detailed results views
- Project and code base insights including code complexity, treemaps, call dependencies, and LOC
- Reduce retesting effort by automatically calculating the most efficient set of tests to run to achieve previous coverage when code changes
- Code viewer:
  - View source code alongside pre-processed and instrumented code
  - Color-coded by whether tests passed or failed
- Compare reports
- Database-like search function

### Compatibility

- Runs on host operating systems
  - Windows® 10+ and Windows Server® 2016+
  - Linux distributions including Ubuntu®
- Results can be collected from systems without supported operating systems and transferred to a supported system for analysis

### Licensing

- Enterprise license gives you access to new versions, support and maintenance
- One-year support and maintenance included in purchase price
- Single price for all features
- Licenses transferable across projects

ADATEST® is the trade mark of QA Systems GmbH registered in the EU under No. 000151043 and in the UK under No. UK00900151043. VectorCAST® is the trade mark of Vector Software, Inc. registered in USA under number 4949992. Other trade marks or registered trade marks are property of their respective owners. See [www.rapitasystems.com/trademarks](http://www.rapitasystems.com/trademarks) for a non-exhaustive list of third-party trade marks used in Rapita Systems' advertising.

## About Rapita

Rapita Systems provides on-target software verification tools and services globally to the embedded aerospace and automotive electronics industries.

Our solutions help to increase software quality, deliver evidence to meet safety and certification objectives and reduce costs.
